integrable (quadratic growth)
quartic oscillator ($\mathbb{R}^3$)
isotropic quartic, $n = 2$ ($\mathbb{R}^5$)
isotropic, magnetic field
decoupled $q_1^4 + q_2^4$
not integrable (exponential growth)
anisotropic $(q_1^2 + 2q_2^2)^2$
Garnier
open Toda, 3 particles
sextic isotropic
degree d_k
iterate k
